The Security Connected framework helps you meet industry and government regulations, and lower the cost of continuous compliance. Optimized for ease of management with automation and enforcement, McAfee solutions improve visibility, limit exposure, and ensure continuous compliance, saving you time, effort, and expense.

Easier compliance with fewer vendors to manage – Consolidate endpoint, network, and cloud-based controls, making it easier to comply with industry, federal, and state regulations.

Save time and enhance accuracy with automated tasks – Avoid time-consuming ad hoc processes and eliminate errors with automated scanning, audits, remediation, enforcement, and reporting. Assess and map IT controls to regulatory guidelines with automated, industry-leading policy templates.

Assess risks and prioritize remediation—automatically – Find and prioritize problems on your endpoints and networked systems, then correlate vulnerability, violation, asset, and countermeasure data to apply limited resources for maximum compliance return.

Consolidate your view across IT controls – Work from a single management platform to gain visibility across IT controls and PCI requirements.

Avoid data loss with outbound email controls – Use predefined dictionaries (English only) and heuristics to automatically scan email for financial and private information. Block, monitor, or encrypt messages based on policy to ensure compliance.

Data Protection

Block unauthorized access to data on your network, in storage systems, or at the endpoint with strong encryption, authentication, data loss prevention, and policy-driven controls.

- McAfee Complete Data Protection—Advanced
- McAfee Total Protection for Data Loss Prevention

Endpoint & Server Security

Monitor and block unwanted activity on your systems, and protect servers, applications, customer information, and databases.

- McAfee Host Intrusion Prevention for Desktop
- McAfee Host Intrusion Prevention for Server

Network Security

Intrusion prevention keeps unwanted traffic off of your network and protects every network-connected device.

- McAfee Network Security Platform (IPS)

Risk & Compliance

Integrate whitelisting and change management to limit risk from unauthorized software and block unauthorized changes to system files.

- McAfee Application Control
- McAfee Change Control

Security Information & Event Management (SIEM)

Identify and respond quickly to threats with a complete SIEM solution.
